MANUAL BITCOIN LIGHTNING

(Instant Bitcoin Exchange Network)

(₿)

Sending and receiving bitcoins over the Lightning network using the Wallet of Satoshi mobile app

By: Victor Giron

Quick menu (only if you have previously taken a look at the document):

IMPORTANT

To use this application and make use of Bitcoin's instant network (*Lightning Network*), we have to <u>change our mentality</u> that transferring bitcoins is set the amount and giving it to send.
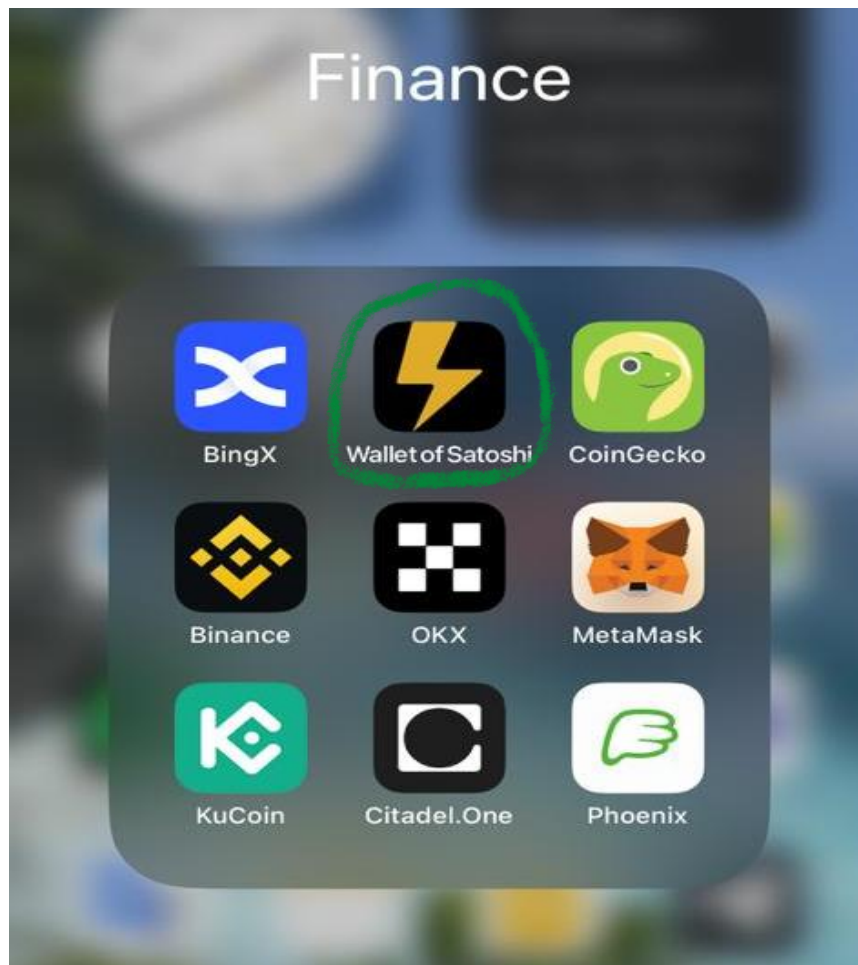

It is done in reverse, <u>first</u> we need <u>an invoice that someone generates for us</u> to be able to send a certain amount of bitcoins to that person.

First of all we have to go to our application and open it:

(If we do not have it downloaded here we can download it)
iPhone: https://apps.apple.com/us/app/wallet-of-satoshi/id1438599608
Android: https://play.google.com/store/apps/details?id=com.livingroomofsatoshi.wallet

We are going to configure in Dollars or Euros if we do not already have it, in the menu of the three bars at the top right
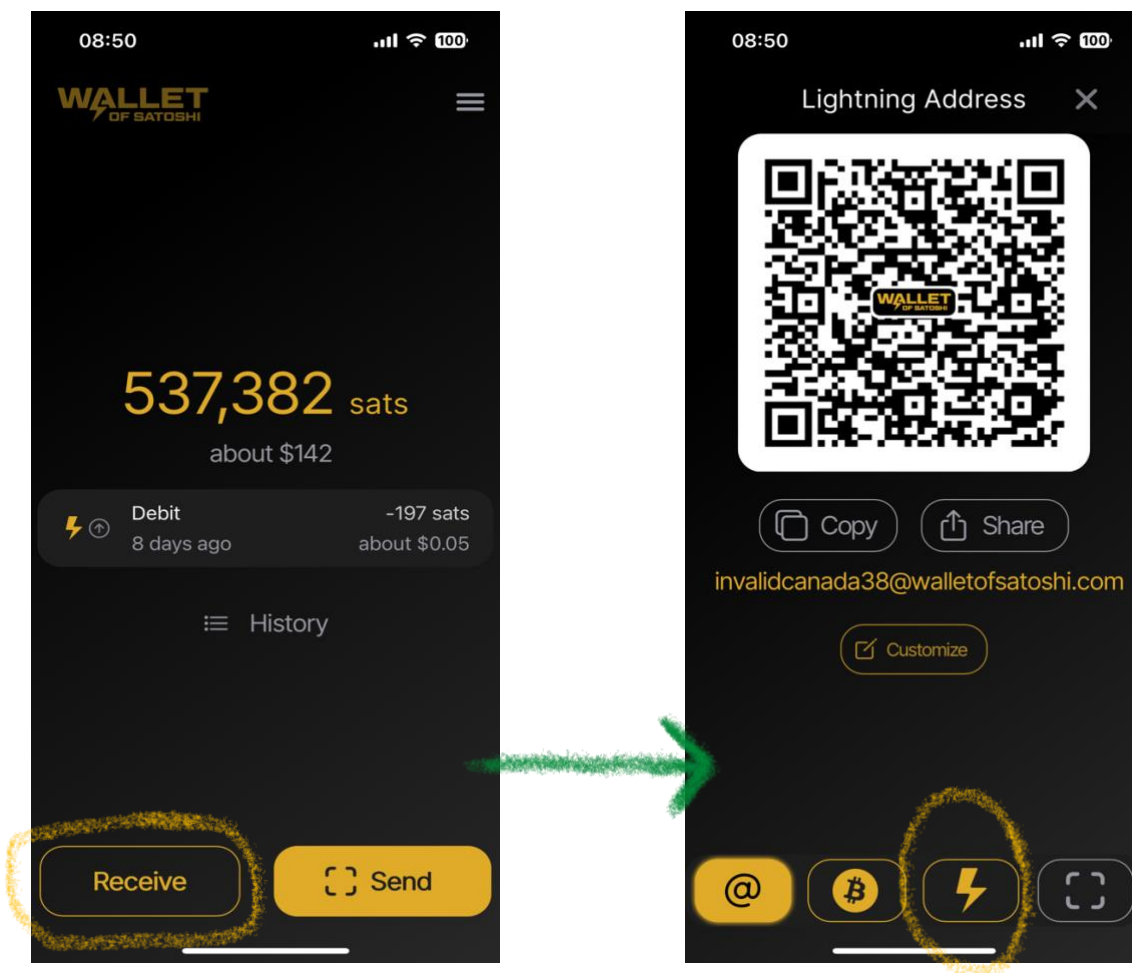

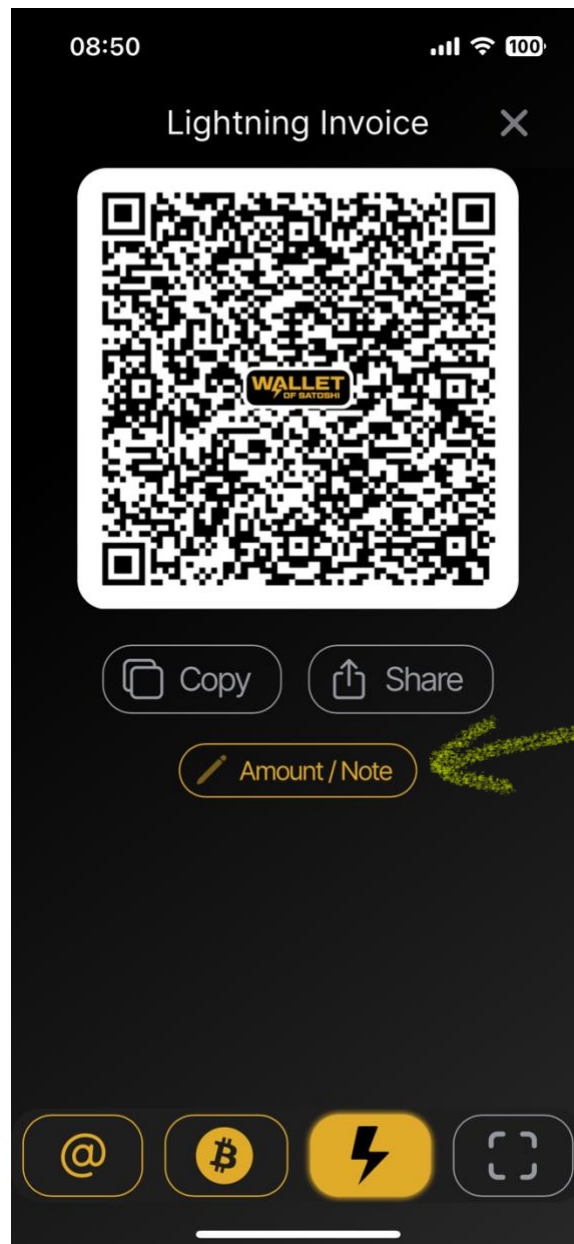

To receive bitcoins

We put ourselves in the mindset that we are like a merchant that wants to charge a customer's card.
On the main screen we are going to do the following:
1. Hit the **RECEIVE button**
2. **Then we give the LIGHTNING BUTTON** (bottom right) to put us in instant mode
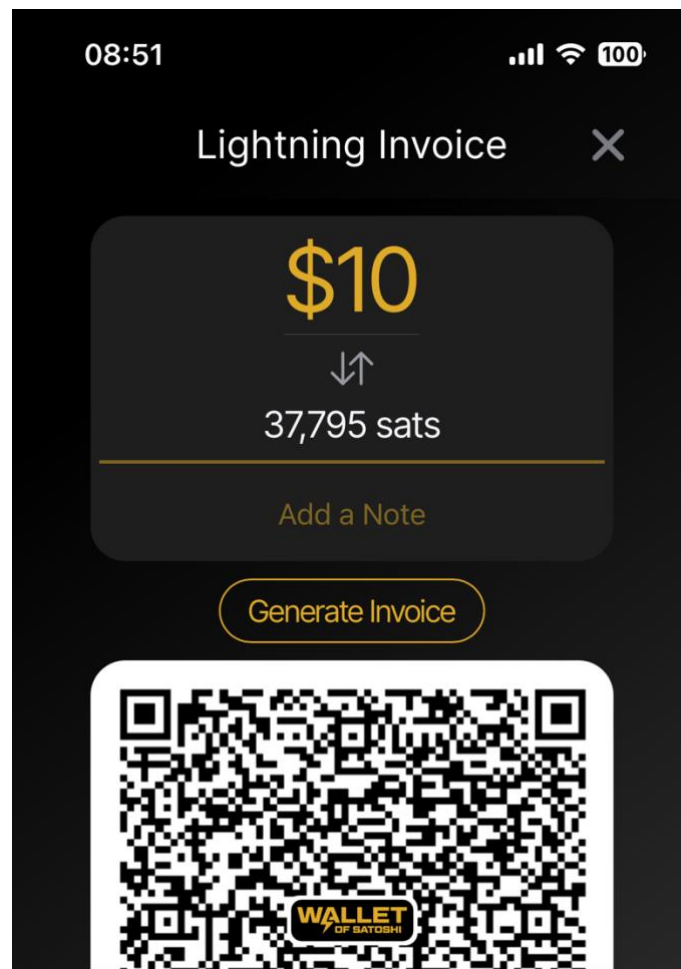

3. Press the ✏ <u>AMOUNT / NOTE</u> button to enter the amount we want

4. Once here **we can press the ARROWS to** change unit
   and be able to put Dollars and **enter the desired amount
   at the top (**If we do not have it already put, it is only
   done the first time) (Also just below we can put the
   concept to better organize payments)
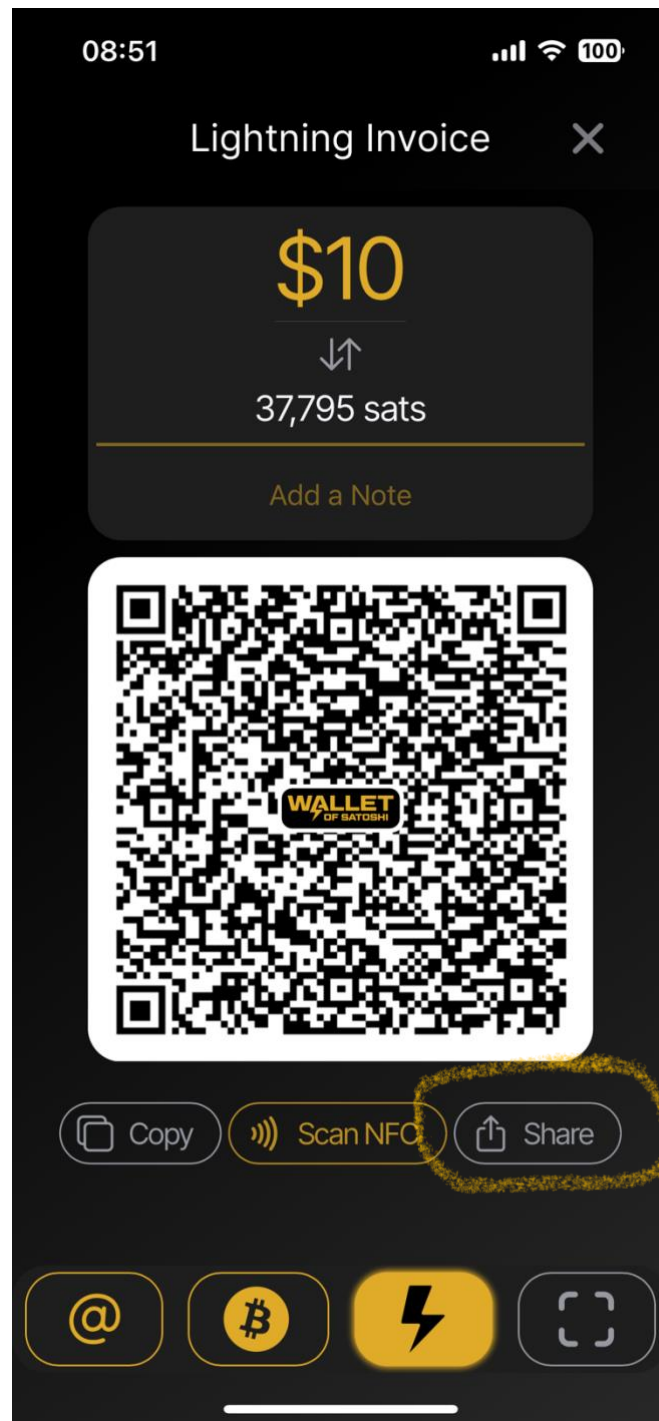

5. Click the button **GENERATE INVOICE**

And that is all!!

If you are in together with the other one just scan the QR code (White Square with Black Dots) How? Here you go to the shipping section directly

Are you not together with the person you want to receive them from? No problem, we send you the invoice by WhatsApp, we see it on the following page:

Share the invoice by **WhatsApp**: We take a screenshot or saving the image when we give the **SHARE button**

Here ends the part of the receiver of bitcoins

To send bitcoins

(first we need the other person's invoice generated)

If we are together:

On the main screen of the application (If you do not know how to get there just close and open it again)
Press the **SEND button** where the camera will open and we can scan the QR and send the bitcoins.

If we are away:

If you received the invoice by WhatsApp:
1. We download the photo as a normal photo and we have to go to the Wallet Of Satoshi application
2. On the main screen click on the **SEND button**
3. Press the **3rd button below that simulates a LANDSCAPE**
4. **Find the previously downloaded invoice photo**
5. **Hit SEND**

DONE!! Now you know how to receive and send bitcoins through Lightning Network with anyone!
